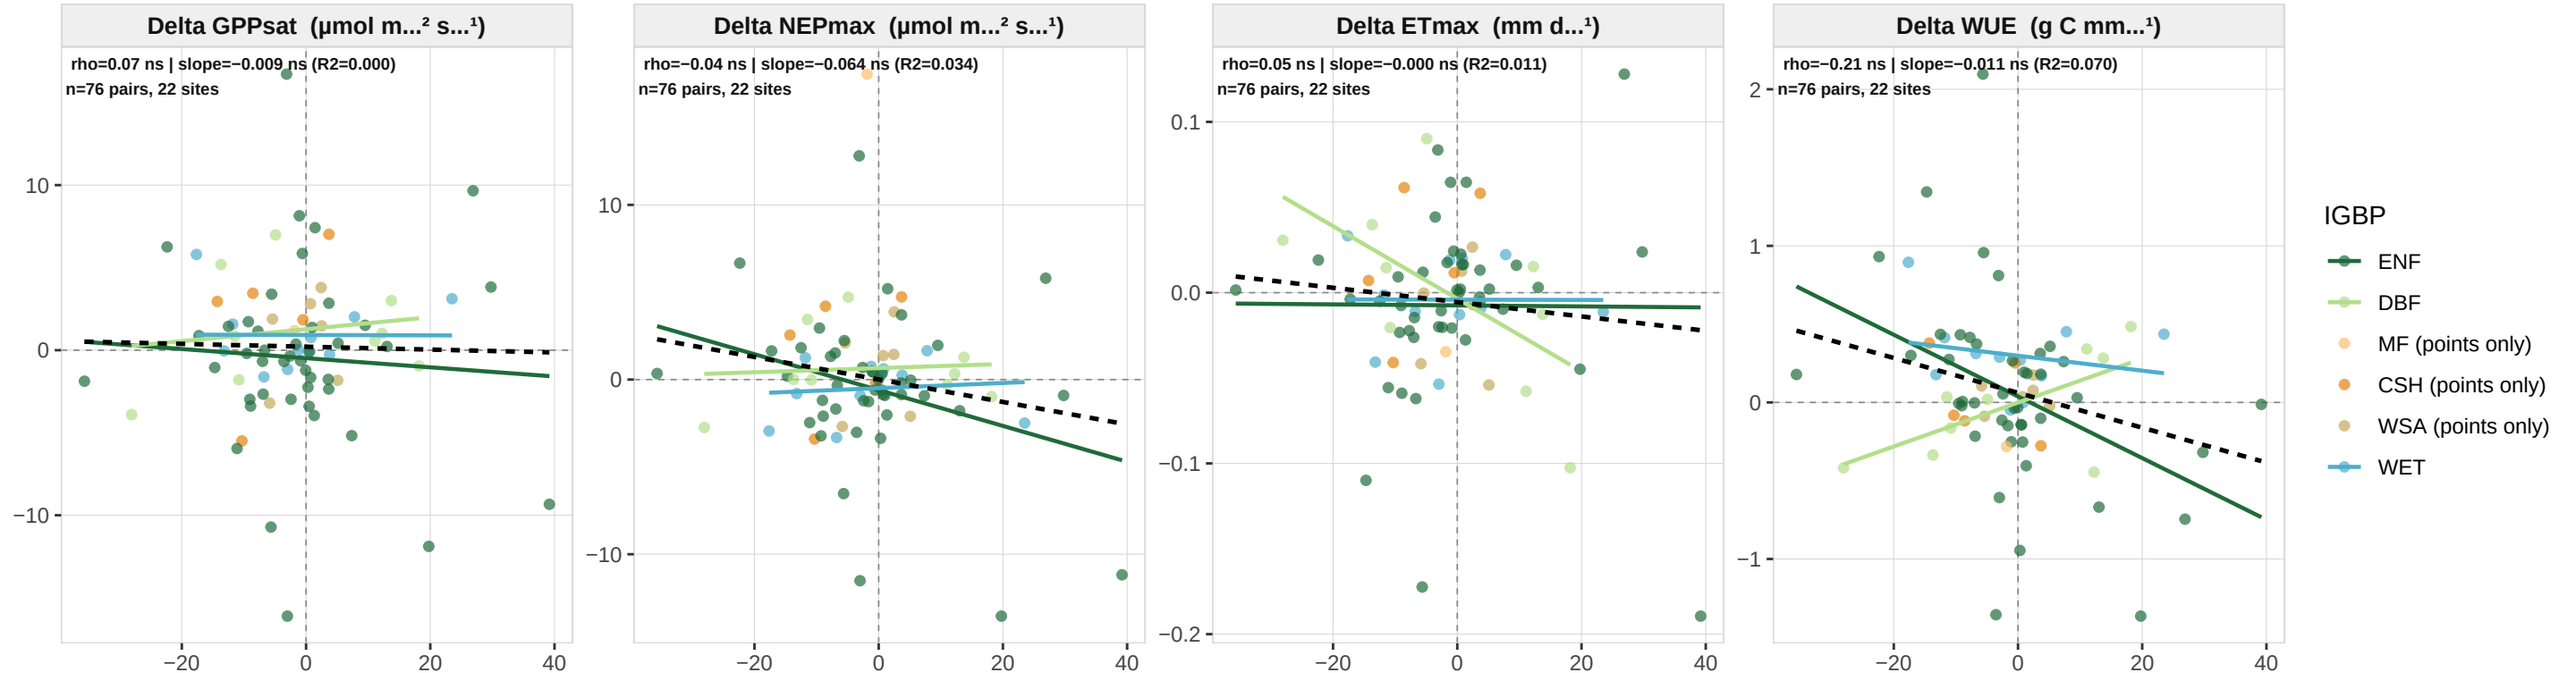
Year−to−year disturbance change vs EFP change, by IGBP − High−disturbance sites only

tc>=30, High−disturbance subset (23/93 sites, same NB threshold as plot_disturbance_vs_clustering.R) | coloured lines = per−IGBP lm fit (>=8 pairs & >=3 sites only) | dashed black = pooled lm fit
annotation: pooled Spearman rho and pooled OLS slope (Delta−EFP ~ Delta−disturbance), BH−FDR across the 4 EFPs



Same underlying pairs as mortality_change_vs_efp_change_highdist.png; IGBP colouring/per−group fits and the OLS slope/R2 are additions, not a replacement.
