Year−to−year disturbance change vs EFP change, by IGBP

tc>=30 (93 sites), consecutive−year pairs only | coloured lines = per−IGBP lm fit (>=8 pairs & >=3 sites only) | dashed black = pooled lm fit
annotation: pooled Spearman rho and pooled OLS slope (Delta−EFP ~ Delta−disturbance), BH−FDR across the 4 EFPs

Same underlying pairs as mortality_change_vs_efp_change.png; IGBP colouring/per−group fits and the OLS slope/R2 are additions, not a replacement.
